Microdistrict is a socialist concept for designing a residential compound. It was widely adopted amongst the Socialist Bloc, including North Korea during the post-war period. Although lots of microdistricts have been and are being demolished since the Fall of the Berlin Wall, the essence of it is still valid in the current. Especially, having production facilities within residential compounds is closely related to the sustainable strategy that promotes local production and consumption these days. The lecture will address a brief history of evolution of North Korean microdistrict and question how it could be reinterpreted for the future.

Dongwoo is the co-founder of PRAUD and the assistant professor at Hongik University Graduate School of Architecture and Urban Design in South Korea. He was an adjunct professor at Rhode Island School of Design from 2011 through 2017, and a visiting assistant professor at Washington University in St. Louis in 2016. He received a Master of Architecture in Urban Design from Harvard University and his bachelor’s degree from Seoul National University. He co-curated the Cities Exhibition in the 2019 Seoul Biennale with Rafael Luna and Pyongyang Sallim in 2017 with Calvin Chua. He is the winner of the Architectural League Prize 2013, and participated in the Golden Lion winning award Korean Pavilion in 2014 Venice Biennale. He is the author of “Pyongyang, and Pyongyang After,” “(Un)Precedented Pyongyang,” and “I Want to be METROPOLITAN,” and the editor of “North Korean Atlas.”
